

SUMMARY

MoxieWORLD is a comprehensive asset tracking and productivity solution for your entire team; managers and executives alike. Easily installed in hours, our system is able to increase workplace productivity, efficiency, and safety within days of setup. The MoxieWORLD app recreates a digital 3D ‘twin’ of any facility and allows you to monitor real-time and historic metrics through powerful and intuitive visualization. Our software tools, from App to API, are accessible and adjustable, allowing your IT team to build and customize the system for your needs. We also maintain a US-based support team to make sure you get the best setup and operating experience possible. MoxieWorld tracking requires two hardware components: **moxieTags** are attached to each asset that is tracked (think of it like an indoor GPS), and **moxieAnchors** are mounted to your existing infrastructure (columns, walls, lights) to provide a constellation of references for the moxieTags. Our portfolio of ‘Plus One’ sensors can be added to any moxieTag and provide additional data such as machine power consumption and environmental conditions.

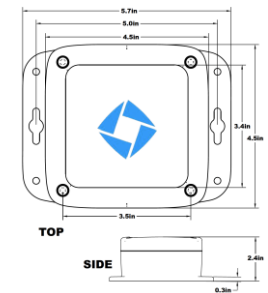

Hardware Specs

UWW System	nRF52840 Cortex M4F (Bluetooth MCU) UWB TWR Transceiver
Network Options	2.4 GHz WIFI LTE CAT-M1 (Hologram)
Power Options:	100-277 VAC outlet dedicated power 5-24VDC, 12-24 VAC
Enclosure	Polycarbonate, IP67, UL 508A, 80°C
Sensors	UWB – DW1000 Transceiver IMU motion detection
‘Plus One’ Options	Encoder (crane hoist, CNC travel, etc.) AC Current clamp (non-invasive) Env. Probe (pressure, temp, VOC)

MOXIE TAG

MOXIE ANCHOR

APP INTERFACE

Configuration	Fast Bluetooth Setup In-app UI builder for customization
Live Data	Low-latency MQTT – up to 155 tags per project Secure MQTT Client API
Historic Data	Unlimited Recording In-app Influx channel tool and dashboard Secure InfluxDB API
